

RADON OVERVIEW

Radon is a cancer-causing , radioactive gas.

You can't see radon. And you can't smell it or taste it. But it may be a problem in your home. Radon is estimated to cause many thousands of deaths each year. That's because when you breathe air containing radon , you can get lung cancer. In fact, the Surgeon General has warned that radon is the second leading cause of lung cancer in the United States today.

Radon can be found all over the U.S

Radon comes from the natural (radioactive) breakdown of uranium in soil, rock and water and gets into the air you breathe. Radon can be found all over the U.S. It can get into any type of building - homes, offices, and schools- and results in a high indoor radon level. But you and your family are most likely to get your greatest exposure at home , where you spend most of your time

You should test for radon

Testing is the only way to know if you and your family are at risk from radon. EPA and Surgeon General recommend testing all homes below the third floor for radon.

You can fix a radon problem

Radon reduction systems work and they are not too costly.
